

Carbon Reduction Plan Template

Supplier name: Salts Healthcare Ltd

Publication date: April 2023

Commitment to achieving Net Zero

Salts Healthcare is committed to achieving Net Zero emissions by 2035.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2021	
Additional Details relating to the Baseline Emissions calculations.	
<p>Salts Healthcare Ltd implemented its EMS, known as The Green Promise and based on ISO 14001 in 2012 and since this year energy performance has been monitored, measured, and included to the Organisation's objectives for reductions of CO2 emission. However, carbon footprint data at that time was limited and used for internal improvement projects only. With time, improved procedures enabled us to fully comply with new requirements regarding the energy performance and carbon emission reductions. From 2015 Salts Healthcare EMS system was able to ensure compliance with ESOS requirements and from 2019 data for SECR requirements was collected and reported appropriately.</p> <p>From 2023 the company will also include carbon emissions calculation from 5 categories of Scope 3 (business travel, employee commuting, waste disposal, upstream and downstream transportation and distribution), which will be reported in 2024.</p>	
Baseline year emissions: 2021	
EMISSIONS	TOTAL (tCO2e)
Scope 1	422.66
Scope 2	830.71

Scope 3 (Included Sources)	n/a
Total Emissions	1253.37

Current Emissions Reporting

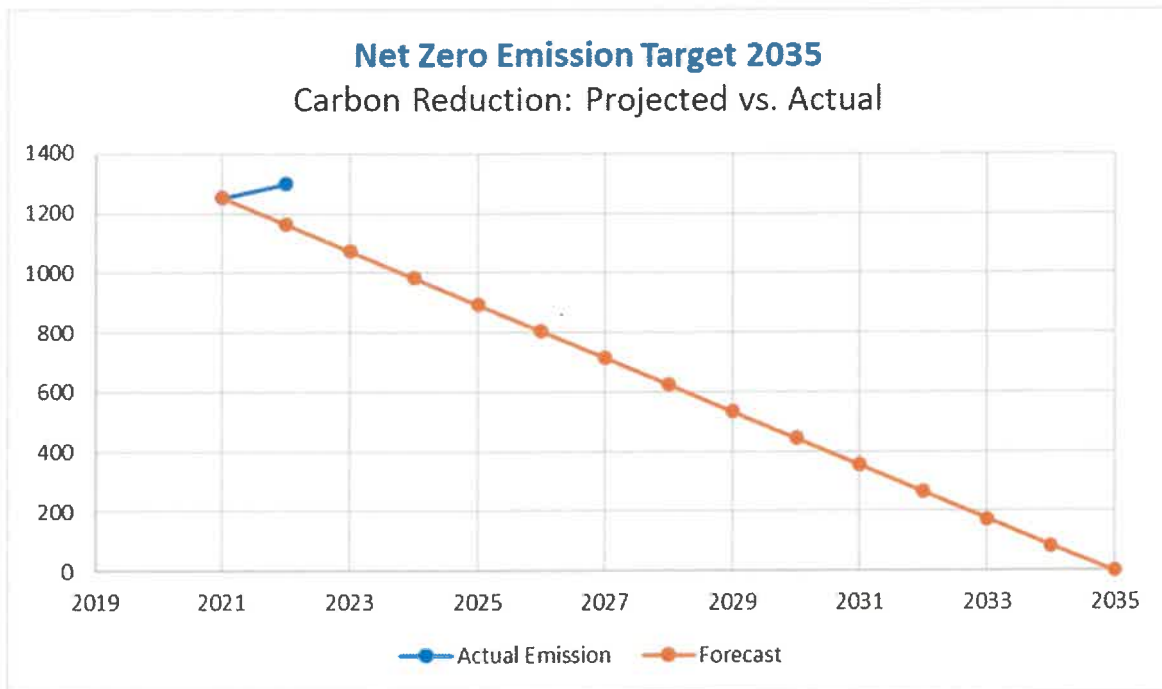

Reporting Year: 2022	
EMISSIONS	TOTAL (tCO2e) 1299.02
Scope 1	397.9
Scope 2	736.36
Scope 3 (Included Sources)	164.76 (Waste)
Total Emissions	1299.02

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 624 tCO₂e by 2028. This is a reduction of 50% from 2021 emissions.

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2021 baseline. The carbon reduction achieved for Scope 2 emissions equate to 94 tCO₂e, which is 11% reduction against 2021 baseline.

The reduction was achieved by relocation of our distribution centre from separate nearby facility to our main manufacturing hub.

The current environmental objectives include maintaining certification to ISO 14001 and monitoring, recording and constant work towards reduction of the company's carbon footprint through various initiatives, like installation of energy efficient LED lighting systems across all main facilities and motion sensors installed within the company sites. We are also hoping to switch all of our Energy contracts to renewable energy sources by the end of 2023.

In the future we hope to implement further measures such as:

- Working toward replacement of non-recyclable materials with recyclable or biodegradable materials.
- Reduction of the amount of packaging used for finished products, raw materials, and storage of finished products.
- Promoting electric cars and installation of electric cars chargers available for all staff members.
- Cycle to work scheme to promote reduction of transportation emission from commuting.
- Reduction of business travel and promotion of sustainable commuting.
- Investigate alternative, greener solutions for energy sources and possible electrification of all sites to reduce use of fossil fuels.
- Investigate innovative solutions for the current non-recyclable waste.
- Working towards Green Supplier Chain by involving suppliers to the Net Zero programme.
- Investigating possible energy saving sources and energy efficiency of used equipment.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
